Effective January 1, 2023

Oly Series Specifications

Manufactured using the highest grade veneers and hardwood solids with our 'Coriander Finish' that exceeds industry standards. We can also incorporate any high pressure laminate into the work surfaces to meet your design needs.

Oly work surfaces and end panels are made from 1 ¼" industrial grade wood core material with an engineered veneer or high pressure laminate tops and gator-backed balancing sheets. Laminate tops are available with a matching 3mm PVC Trim.

Case sides, drawer faces and modesty panels are made from ¾" industrial grade wood core material wood veneers and laminates. All drawer faces in the Oly Series come with one of two option of drawer pulls.

Drawers are constructed using ½" thick 7 ply maple plywood sides and a ¼" thick maple plywood bottom. Locks are standard on all pedestal drawers.

File drawer slides have a 150 lb. rating with a 1" over travel and steel ball bearings.

Box drawer slides have a 100 lb. rating and a one inch over travel extension.

Adaptive dampening soft close hinges are standard on all Oly series doors.

Optimal strength and durability with the highest level of precision is achieved as all components are cut, edge banded and bored using computer controlled equipment with down pin joinery as standard.

For all wood units a stain / seal coat of high solids - water white varnish, including a UV Block, is applied, followed by four coats of 20% sheen varnish with hand sanding between each coat.

Modesty panels are connected using Mod-Ease Clips for easy, secure installation.

All Oly products are available in Oly Series standard wood species and laminate finishes. In addition to our standard finish options, we also offer custom colors.

back lit logos

Back Lit Logos

Logos and images can be routed into the backside of the Solid Surface Transaction Cowl and back lit with LED lighting panels to create a clean and seamless way to individualize your reception station. Available only in light color solid surfaces.

What formats for logos will work best?

To provide a custom BackLit Logo that meets your needs, it's important that you provide the logo as a vector based file. You can save your logo as an .eps file for the highest quality reproduction. As long as your logo is vector artwork, it can also be provided as .DWG, DXF, .ai or PDF file.

How we Back Light Logos In the Solid Surface

First we convert the vector file of your logo into Alpha Cam Program that will tell the CNC Router the proper tool paths and depths to reproduce your logo.

Next we route your logo into the back side of the selected solid surface and then we build the cowl.

Once the Solid Surface Cowl is complete we can add the light box that houses the LED Light Panels that are placed to provide maximum luminescence of your Logo.

About our LED Light Panels

Using 12" x 12" squares, the razor-thin panels can be snapped down to 3" x 3" squares and connected back into any configuration, creating the perfect solution with complete light uniformity. Each lighting unit will come with a dimmable switch and 6' Cord. Our Standard Color Temp is 5000k other color temperatures are available upon request.

Options

Color- We can also use colored gels to create separate colored sections. Using the same lighting source.

Contrast- We can also make contrast sections that are back lit but look darker by programming the settings of our router to create depth.

Effective February 2022, add a 10% temporary freight surcharge to pricing for zones 2-5.
